

Design I.T. - Engineer Support Services

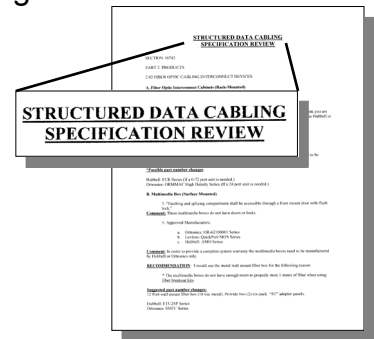

Program Benefits:

- LAN cabling specifications current with Industry Standards
- Specification monitoring & automatic updates
- Comprehensive Industry training courses
- Sales & Marketing tools via LAN cable commissioning

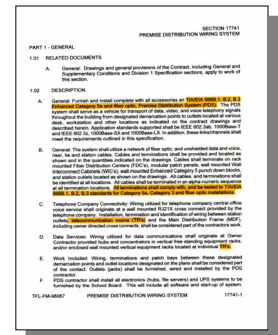

Critical Analysis - Base Specification

After review of your specification the Design I.T. program provides a report detailing sections of the specification requiring modification. Report analysis is based on current TIA/EIA Standards and IEEE application requirements. ProLAN can also provide customized Division 16 or 17/25 LAN cabling specifications!

Specification Update - Analysis Modification

Based on the specification analysis and your approval. ProLAN's Design I.T. program will update your specification. The document will reflect the changes we discussed and all modified text is highlighted for your convenience. The specification support continues with automatic updates to the document. When TIA/EIA standards or part numbers change your specification is modified to reflect the new changes.

Industry Training Courses

- TIA/EIA Installation Standards
- TIA/EIA Field Testing Standards
- Bonding and Grounding
- Building Entrance Protection
- Fire Stopping
- IEEE Applications

LAN Cable Commissioning

ProLAN Solutions commissioning program is a systematic process of ensuring LAN cabling systems perform according to design intent and meet owner's operational needs. Commissioning the ProLAN cabling solution provides your company a sales and marketing tool. The program provides value-added services to your client with no additional cost!
